

Packaging solutions

“There are no old ways to the new destinations”

N°1

In the appropriate packaging process

60

Type-approvals of dangerous goods packaging

65%

Reduction of the load weight used in cardboard pallets

Multi-material

Thanks to 360 you will have a new perspective of packaging for the future industry with a system of packaging 4.0. We use a multi-material packaging since every packaging material has some features and specific applications –stacking, containing, conductivity and damping– and since every supply chain needs specific packaging –for only one use, returnable or mixed among others.

Therefore, in the first phase of every design we carry out a thorough selection of all the materials to be used such as cardboard, wood, polypropylene, honeycomb, HDPE, fibre polyethylene, flexible or even optimal combinations of them. In fact, the same packaging can have a material which is resistant against stacking or damping or which is provided with pieces which protect them from external pollution.

Personalised

This new concept goes beyond the personalisation and custom packaging. We not only use the latest 2D and 3D technologies, but also we capitalise on the advantages in machinery and pre-visualisation and prototyping tools in order to achieve packaging in record time. This allows us to personalise the production a lot and to adapt the JIT and Kanban programmes.

Integrated

In addition, this type of packaging is integrated in the logistics processes of our clients since we understand the fact that packaging goes beyond the box. We know that this helps to reduce the costs of managing, storage and transportation while avoiding the costs of packaging again and optimising the filling processes. We work with clients and at their homes: in the processes of the internal and external logistics or in the expeditions by doing in-house services –packaging and picking.

Connected

We are connected with clients. We follow the design evolution of the packaging, even before having finished the product design, since we know that the terms and the design and developing costs are reduced significantly. The packaging 4.0 encompasses a wide offer of value which adapts to every logistic chain:

- ✓ Cardboard pallets
- ✓ Dangerous goods packaging
- ✓ Large dimension packaging
- ✓ Small dimension packaging
- ✓ Stowage packaging
- ✓ Protection packaging
- ✓ Surface treatments
- ✓ Logistics services
